

Software Developer

Job description

You are someone who is capable in ...

Ideation, research and development of web -mobile business apps?

Using Zoho CRM and Creator platform to build apps that are robust and scalable?

Adhering to complex requirements and roll out the apps and more?

And do this for top MNC's and SME's across the globe?

Welcome to ITK

ITK is a Zoho technology consulting and app development company that is deeply passionate and experienced in offering robust business process automation and management solutions to diverse industries. We are technology and training partners to Zoho Corporation and work exclusively on the Zoho ecosystem providing Creator and CRM solutions to our clients. We are also involved in Industry-Academia research projects and inventing apps that solve specific industry use/test cases.

Since 2016, we have created over hundreds of apps and coded over 1 million lines of Deluge Coding (Zoho's very own scripting language) and a lot more on Integrations and niche process automations.

We have successfully rolled out industry specific products like ACEMA & Journali for the Education sector, Autogarage CRM for the automotive sector and involved in many other apps for diverse industry verticals.

We are completely boot-strapped and have not had any external funding and we manage our business goals with a dedicated team of professionals on the Board and off the Board who put the company first to deliver world-class service to all clients.

We offer a casual work culture, flexible work hours, flat organization structure making your work / training a rewarding journey and experience.

About the Role – Software Developer

As a Software developer, you will focus on ideation, developing, and implementing a variety of custom applications specific to client needs and build it on Zoho Creator and Zoho CRM.
